

tesa® 4156

Specialized tape for film mounting, also used in lithography for positioning, sealing, for protecting films and photosensitive plates from exposure.

Product Description

The tape is a specialized "lithographic" tape developed for the purpose of protecting films and negatives. The tape is available in "litho-red" (color 57).

- resistance to light and aging, and it can be easily removed without separating or tearing. In addition, it does not leave adhesive residue after removal.
- easy to apply, as it adheres flat when applied and is not prone to curling at the edges.
- guarantees precise surface protection and perfectly even edges.
- clearly visible to the human eye, even beyond the assembly table. Therefore, parts that have already been secured are visible to the naked eye, making it possible to apply the tape precisely.
- Thanks to its unique properties, tesa® 4156 PV1 tape is also suitable for splicing film.

Main applications:

- tesa® 4156 PV 1 is a speciality tape designed for film and negative mounting.
