

# tesa® 4863 PV3

Silicone rubber-coated fabric tape with exceptional adhesion.

## Product Description

The tesa® 4863 tape consists of a specially treated fabric with a silicone rubber coating. Its embossed surface is extremely resistant to sticky substances, but still guarantees no slipping on smooth surfaces. The embossed surface maximizes and prolongs the non-slip properties.

## Application Fields:

tesa® 4863 was specially developed for roller wrapping. In many cases, the new roller covering can be applied without removing the roller from the machine.

The tape is used in:

- printing industry;
- textile industry;
- adhesive tape production;
- generally in roll-based processing and converting industries.

## Technical Information (average values)

The values in this section should be considered representative or typical only and should not be used for specification purposes.

## Product Construction

Backing material **silicone-coated fabric**

Type of adhesive **natural rubber**

Total thickness **620 µm**

color **grey**

## Adhesion to Values

Steel (after 14 days) **3.5 N/cm**

## Additional Info

- The shelf life of the product is 12 months.
